

Hyperraising higher subjects

Tarcisio Dias (UConn)
Yale Syntax Reading Group
October 24th, 2025

1. Introduction

Languages differ with respect to the availability of hyperraising, i.e., subject movement out of a finite clause. English, for instance, does not allow it (1), whereas Brazilian Portuguese (BP) does (2).¹

- (1) a. It seems that the boys ate cake.
b. *The boys seem that ate cake.
- (2) a. Parece que os meninos comeram bolo.
seems that the boys ate.3PL cake
'It seems that the boys ate cake'
b. Os meninos parecem que comeram bolo.
the boys seem.3PL that ate.3PL cake
'It seems that the boys ate cake'

Note for BP that the 3rd person plural DP subject *os meninos* ('the boys') triggers agreement on both embedded and matrix verb when it surfaces in pre-verbal position clause initially (2b). When it occurs pre-verbally to the embedded verb (2a), a *pro* expletive is inserted as the matrix subject, thus triggering default 3rd person singular agreement and satisfying the EPP.²

In this talk I propose that the availability of hyperraising is tied to the position DP subjects occupy. More specifically, I will claim that subjects undergoing HR are higher than subjects that don't hyperraise. In other words, (3).

- (3) Only higher subjects may hyperraise. (one-way correlation)

¹ Cf. Martins & Nunes (2005, 2010), Rodrigues (2004), Ferreira (2004, 2009), Nunes (2008, 2016), Fong (2018), Pires & Nediger (2018), Lohninger, Kovač & Wurmbrand (2022), ao.

² Cf. Duarte 2003, Martins & Nunes 2005, ao.

Such higher subject position will be identified to Bošković's (2024) Spec,A/A'P, a mixed A/A' position above TP and below CP claimed to host, for instance, locally moved *wh*-subjects, where they also satisfy EPP and check nominative Case without through Spec,TP.

HR as an impossibility in, e.g., English, has been of theoretical interest across decades for reasons such as

- violation of the Tensed S condition (Chomsky 1973)
- violation of the Chain condition (Chomsky 1986)
- violation of Greed (Chomsky 1995)
- Activation Condition effect (Chomsky 2001)
- violation of Phase Impenetrability Condition (PIC) (Chomsky 2001)
- improper movement (Chomsky & Lasnik 1993, Fukui 1993)

Several proposals have been made on the basis of Brazilian Portuguese HR:

- Ferreira (2004, 2009), Nunes (2008, 2016, 2019, ao): BP subjects are accessible for HR due to finite T being (optionally) phi-defective (phase defectivity)
- Fong (2018): HR subjects undergo **A**-movement through Spec,CP (C has A-features)
- Pires & Nediger (2018): Case valuation in HR languages can be delayed (parametric approach)
- Lohninger, Kovač, & Wurmbrand (2022): HR subjects undergo movement through a special CP, i.e., CP.R, headed by mixed A and A' probes that are independently satisfied

A common feature among these proposals is that they assign special properties to either T or C:

- phi-defective T bleeding nominative Case; also for Greek (Alexiadou & Anagnostopoulou 2002), Japanese (Uchibori 2000).
- C in HR constructions taken to be different than C in non-HR constructions

There is, however, no morphophonological distinction between the presumed HR special Ts or Cs and their non-HR counterparts. In fact, HR is possible out of clauses that are neither tense or phi defective in languages like Zulu (4) or Yoruba (5), which would make one wonder why such defectivity is relevant for some languages (BP, Japanese, Greek) but not in others (Zulu, Yoruba).

(4) *Zulu*

UJabu u-be-fanele izolo [ukuthi a-hamb-e namhlanje]
 Jabu.1A SM1A-AUX-ought yesterday that SM1A-leave-SBJV today
 'It was vital yesterday for Jabu to leave today' (Zeller 2006, p.267)

(5) *Yoruba*

Òjò jo [pé ó ma rò ní òlà]
 rain seems COMP 3SG will fall at tomorrow
 'Rain seems that it will fall tomorrow' (Ademola-Adeoye 2011, p.128)

Additionally, tying HR to the availability of a special C that allows, e.g., A-movement out of CP, seems to blur the distinction between HR and non-HR languages, since it has been observed that A-movement out of CP may actually be permitted even in languages that do not allow HR like West Ulster English (6), French (7), and Belfast English (8).

(6) *West Ulster English*

Who_i did you expect [_{Agrop} your mother_j [_{CP} [all *t_i*] to meet *t_j* at the party]]?
 McCloskey (2000)

(7) *French*

Il commence à pleuvoir
 it begins C to.rain
 'It's starting to rain'

(8) *Belfast English*

He seems for to have left early.

I here propose that HR is an effect of subjects occupying a position structurally higher than Spec,IP and lower than Spec,CP - Spec,A/A'P (9).

(9) SUBJ ... [_{A/A'P} *t_{SUBJ}* [_{TP} [_{IP} *t_{SUBJ}* ...]]]]

This position is claimed to be available universally and has been proposed on independent grounds.

2. Hyperraising in Brazilian Portuguese

In this section I present the evidence that has been presented to argue for HR in BP.

- A HR reading (raising predicate does not assign a theta-role)

- (10) O estojo parece que sumiu
the pencil case seems that disappeared
'It seems that the pencil case disappeared.'

- Idiom preservation

- (11) A cobra parece que vai fumar
the snake seems that will.go smoke
'It seems that the snake will smoke' ('It seems that things will go wrong')

(Martins & Nunes 2005)

- Island effects

- (12) a. *Complex NP constraint*

*Os meninos parecem que [DP O fato de que *t* venham nos alegre]
the kids seem.3PL that the fact of that come.3PL us cheer
Lit. 'The kids seem that the fact that (they) are coming makes us happy.'

(Pires & Nediger 2018: 191-2)

- b. *Adjunct island*

*Alguns alunos parecem que começou a chover [adjunct depois que *t* chegaram]
some students seem.3PL that started to rain after that arrived.3PL

- Variable bound reading of HR subjects with no weak crossover effects

- (13) Nenhum aluno parece pro orientador dele que entendeu a lição
no student seems to advisor his that understood the lesson
'No student seems to his advisor to have understood the lesson'

(Fong 2018: 11)

- HR subjects can be weak pronouns (14) and negative quantifiers (15) - against (pure) topicalization

- (14) a. *Cê, o João me disse que está doente.
you_{weak} the João me said that is sick
'João told me that you are sick.'
b. Cê parece que está doente.
you_{weak} seems that is sick
'You seem to be sick.'
- (15) a. *Ninguém, o João disse que entendeu o problema.
nobody the João said that understood the problem
'João said that nobody understood the problem.'
b. Ninguém parece que entendeu o problema.
nobody seems that understood the problem
'Nobody seems to have understood the problem.'

Nunes (2008:93)

- Intervention effects

- (16) a. Parece que o bolo, o João comeu.
seems that the cake the João ate
'It seems that the cake, João ate.'
b. *[o João]_i parece que o bolo, t_i comeu
the João seems that the cake ate
'João seems that the cake, ate.' (int)

Nunes (2008:95)

(17) *NPI licensing*

- a. Ninguém moveu um dedo pra me ajudar.
 nobody moved a finger to me help
 ‘Nobody lifted a finger to help me’
- b. *Ninguém disse [que a Maria mexeu um dedo pra me ajudar]
 nobody said that the Maria moved a finger to me help
 ‘Nobody said that Maria didn’t lift a finger to help me’ (Int.)
- c. Ninguém parecia [que *t* ia mexer um dedo pra me ajudar]
 nobody seemed [that went move a finger to me help
 ‘It seemed that nobody was going to lift a finger to help me.’

(Nunes 2008, p.95)

3. A higher subject position

Bošković (2024) argues for the existence of an intermediary position between TP and CP, claiming that it hosts locally moved *wh*-subjects. Crucially, the author shows that neither Spec,TP nor Spec,CP host these elements (18).

(18) *Who left?*

- a. *[CP [IP Who_i [vP *t*_i left]]]
- b. *[CP Who_i [IP (*t*_i) [vP *t*_i left]]]

I here present the main points of the argument, largely based on asymmetries between *wh*-subjects and other types of *wh*-phrases.

First, *wh*-subjects must move (albeit vacuously). Note that *wh-the-bell* XPs cannot be in situ (19a). If *who the hell* in (19c) were in the regular subject position, it would be expected to pattern with (19a) and not with (19b).

(19) *Wh-the-hell asymmetry*

- a. *Who bought [what the hell]?
- b. [What the hell]_i did John buy t_i ?
- c. [Who the hell]_i t_i bought that house?

The scope asymmetry in (20) also advocates against a *wh*-subject in situ analysis. Note that it also cannot move through Spec,TP either, otherwise an inverse scope reading would be expected.

(20) *Inverse scope asymmetry*

- a. Someone loves everyone ($\exists > \forall, \forall > \exists$)
- b. Who loves everyone? ($\exists > \forall, * \forall > \exists$)

Sluicing as *wh*-movement + TP deletion:

(21) Someone bought a car. Who [_{IP} ~~who bought a car~~]?

Subject-verb agreement morphology with *wh*-subjects differs from DP subjects (anti-agreement):

(22) *Kinande*

- a. Kambale a-langira Marya
Kambale AGR-saw Mary
- b. Iyondi yo u-langira Marya
who C ANTI.AGR-saw Mary
- c. *Iyondi yo a-langira Marya
who C AGR-saw Mary

(Schneider-Zioga 1995)

DP subjects don't allow Quantifier float, *wh*-subjects do.

(23) West Ulster English (McCloskey 2000)

- a. *They_i were arrested [all t_i] last night.
- b. Who_i was arrested [all t_i] in Duke Street?
- c. What_i did he say [all t_i]_j that he wanted t_j ?

As for BP:

(24) *Wh-the-bell*

- a. *João beijou [quem diabos]?
João kissed who devils
- b. Quem diabos João beijou?
who devils João kissed
'Who the hell did João kiss?'
- c. Quem diabos beijou Maria?
who devils kissed Maria
'Who the hell kissed Maria?'

(25) *Sluicing*

Alguém comprou um carro. Quem [~~comprou um carro~~]?
someone bought a car Who
'Someone bought a car. Who bought a car?'

(26) *Overt complementizer with wh-subjects*

- a. Quem (que) João beijou *t*?
who (that) João kisses
'Who did João kiss?'
- b. Quem (que) *t* beijou Maria?
who (that) kissed Maria
'Who kissed Maria?'

Conclusion: *wh*-subjects undergo *wh*-movement without going through Spec,TP.

This position, however, is not Spec,CP.

Cases where *wh*-subjects and *wh*-objects or *wh*-adjuncts do not pattern alike:

- Contraction restrictions on two-word *wh*-XPs:

(27) 2-word *wh-object*: contraction blocked (d-e)

- | | |
|---|--------------------------------|
| a. [What]'s Mary buying <i>t</i> ? | ONE-WORD <i>wh</i> -OBJECT: ✓ |
| b. [When]'s dinner <i>t</i> ? | ONE-WORD <i>wh</i> -ADJUNCT: ✓ |
| c. [How]'s your old man <i>t</i> ? | ONE-WORD <i>wh</i> -ADJUNCT: ✓ |
| d. *[Whose food]'s the dog eating <i>t</i> ? | TWO-WORD <i>wh</i> -OBJECT: * |
| e. *[Which man]'s she the fondest of <i>t</i> ? | TWO-WORD <i>wh</i> -ADJUNCT: * |

(28) 2-word *wh-subject*: contraction ok

- | | |
|---------------------------------|--------------------------------|
| a. [Whose food]'s burning? | TWO-WORD <i>wh</i> -SUBJECT: ✓ |
| b. [Which man]'s leaving first? | TWO-WORD <i>wh</i> -SUBJECT: ✓ |

- Interaction between *wh*-movement and topicalization

(29) *Asymmetry in English*

- a. ?Mary wonders [_{CP} which book [_{TopP} for Kim [_{IP} Peter should buy *t*]]]
- b. *Mary wonders [_? which student [_{TopP} for Kim [should *t* buy that book]]]

(30) *Asymmetry in BP*

- a. A Maria quer saber [_{CP} que livro [_{TopP} pro Pedro [_{IP} o Carlos comprou *t*]]]
 the Maria wants to.know which book to.the Pedro the Carlos bought
 'Maria wants to know which book, for Pedro, Carlos bought'
- b. *A Maria quer saber [_? que aluno [_{TopP} pro Pedro [_{IP} *t* comprou o livro]]]
 the Maria wants to.know which student to.the Pedro bought the book

Also, it is possible to topicalize the DP object above the *wh*-subject, but not to topicalize the DP subject above the *wh*-object:

(31) *Topicalization restriction*

- a. E [a garota]_j quem_i (que) *t*_i viu *t*_j?
 and the girl who that saw
 'As for the girl, who saw her?'
- b. *E [a garota]_j quem_j (que) *t*_i viu *t*_j?
 and the girl who that saw
 'As for the girl, who did she see?' (Int)

Note that this also shows the *wh*-subject must move below the position the object is topicalized.

- Interaction between *wh*-movement and polarity adverbs:

- (32) a. ?*[What] (under no circumstances) should (under no circumstances) Mary ever buy *t*?
b. [Who] (under no circumstances) should (under no circumstances) ever *t* hire Peter?

- Different complementizers; Belfast English (32), Norwegian (33):

(33) *Belfast English*

- a. I wonder which author (*that) wrote the book.
b. I wonder which dish that they picked
c. I don't know know when that he is going

(34) *Norwegian*

- a. Vi vet hvem (*som) Marit snakker med
we know who that Marit talks with
'We know who Marit is talking with'
b. Vi vet hvem *(som) snakker med Marit
we know who that talks with Marit
'We know who is talking with Marit'
c. Vi vet hvem (*som) Pål tror (at) har kommet
we know who that Paul thinks that has come
'We know who Paul thinks (that) has come'

- Different focus markers:

(35) *Defaka*

- a. Ì kò Bòmá ésé-kà-rè
 I_[FOC] FOC.SUBJ Boma see-FUT-NEG
 ‘I will not see Boma’
- b. Bòmá ndò ì ésé-kà-rè-kè
 Boma_[FOC] FOC I see-FUT-NEG-KE
 ‘I will not see BOMA’
- c. ándù kíkà ndò à èbèrè rì bòi-mà-kè
 canoe under FOC the dog ke hide-NFUT-ke
 ‘The dog is hiding UNDER THE CANOE’
- d. Bruce_i ndò/*kò Bòmá jíí-*(ke) [_{CP} t_i á ésé-mà]
 Bruce_[FOC] FOC/*FOCSUBJ Boma know-*(KE) her see-NFUT
 ‘Boma knows (that) BRUCE saw her’

Conclusion: *wh*-subjects do not move to the same position *wh*-objects move to.

Proposal: *wh*-subjects move to a position below Spec,CP but above Spec,TP.

Obs.: this is not a *wh*-subject exclusive position; the author also claims other elements may target this position, e.g., subjects in V2 constructions, *only*-subjects, overt imperative subjects, inverted PP locatives, clausal subjects, Singlish non-agreeing subjects, Defaka focus subjects (35), Chinese and Japanese subjects.

I here add another element to this list: HR subjects.

Crucially, this position is taken to behave as a mixed A and A'-position able to satisfy EPP, check nominative Case (so no need to go through Spec,TP), and host A'-movement.

4. BP DP subjects in Spec,A/A'P

For the A behavior, we saw that BP DP subjects:

- preserve idiomatic readings (11, repeated below)

- (36) A cobra parece que vai fumar
the snake seems that will.go smoke
'It seems that the snake will smoke' ('It seems that things will go wrong')

(Martins & Nunes 2005)

- variable bounding with no WCO (13. repeated below)

- (37) Nenhum aluno parece pro orientador dele que entendeu a lição
no student seems to advisor his that understood the lesson
'No student seems to his advisor to have understood the lesson'

(Fong 2018: 11)

- negative quantifier subjects (15, repeated below)

- (38) a. *Ninguém, o João disse que entendeu o problema.
nobody the João said that understood the problem
'João said that nobody understood the problem.'
b. Ninguém parece que entendeu o problema.
nobody seems that understood the problem
'Nobody seems to have understood the problem.'

Nunes (2008:93)

Now, for the A' behavior:

- BP DP subjects pattern with A'-XPs regarding

- lack of subject/object inverse scope reading

- (39) a. Someone loves everyone (some > every; every > some)
b. Who loves everyone? (who > every; *every > some)

- (40) a. Alguém ama todo mundo (who > every; *every > some)
someone loves everyone

- b. Quem ama todo mundo? (who > every; *every > some)

who loves everyone

- subject/negation inverse scope: Saito (2010, 2011) has argued that Japanese subjects are higher than English subjects based on the difference in scope possibilities we see below. Note that BP patterns with Japanese in this respect.

(41) *English*

Everyone didn't take the exam (every > not; not > every)

(42) *Japanese*

zen'in-ga sono tesuto-o uke-nakat-ta (all > neg; *neg > all)

all-nom that test-acc take-neg-pst

'All did not take the test'

(43) *BP*

Todo mundo não fez a prova (all > neg; *neg > all)

everybody not did the exam

'No one did the test'

- topic behavior regarding extraction:

(44) *Extraction out of a topic is better than out of a subject*

- a. ?*who₁ do you think [pictures of *t*₁] are on sale?

- b. ??who₁ do you think that [pictures of *t*₁]₂, John wanted *t*₂?

Lasnik & Saito (1994, p.101)

(45) *No asymmetry in BP (subjects behave like topics)*

- a. *De quem você acha que [as fotos *t*] estão em promoção?
of whom you think that the pictures are in sale

- b. *de quem você acha que [as fotos *t*], o João queria?
of whom you think that the pictures the João wanted

As for the mixed A/A' behavior:

- non-argumental DPs in subject position triggering agreement³

(46) *Topic-prominent agreeing subjects (locatives)*

- a. Chove muito nas florestas.
 rains a.lot in the.PL forests
 ‘It rains a lot in the forests’
- b. Nas florestas chove muito.
 in-the.PL forests rains a.lot
 ‘In the forests, it rains a lot’
- c. As florestas chovem muito.
 the.PL forests rain.PL a.lot
 ‘As for the forests, it rains a lot in them’

- (47)
- a. A tall tree stands in the forest
 - b. In the forest stands a tall tree
 - c. *The forest stands a tall tree

(48) *Topic-prominent agreeing subjects (raised possessors)*

- a. *pro* Furou os pneus dos carros.
 perforated.SG the tires of.the cars
 ‘Someone perforated the cars’ tires’
- b. Os carros_i furaram [os pneus (*de) *t_i*]
 the.PL cars perforated.PL the tires of
 ‘As for the cars, their tires were perforated’
- c. *[Dos carros]_i furou.SG [os pneus *t_i*]
 of.the.PL cars perforated.SG the tires
 ‘As for the cars, their tires were perforated’ (Int.)

- (49)
- a. Someone perforated the tires of the car
 - b. *The car perforated the tires

Such constructions have been analyzed as either having the moved DP agree with the verb from a topic position in the CP domain; see Negrão (1999) and Kato (2006), or as taking Spec,IP in BP to be able to host non-argumental DPs; see Lunguinho (2006), Avelar (2009) and Avelar & Cyrino (2008).

³ Cf. Li & Thompson (1976), Pontes (1987), Negrão (1999), Galves (2001), Kato (2006), Avelar (2009), Kato 2015, Quarezemin (2017).

Finally, aboutness topic (AT) subjects behave differently from AT objects in that they may be realized in the regular subject position.

(50) *AT objects*

- a. A: O Pedro teve que ler o Programa Minimalista pra esse curso.
the Pedro had.3SG to read the Program Minimalist for this course
'Pedro had to read the Minimalist Program for this course'
- b. B: Já o Barriers_{AT}, ele não teve que ler.
JÁ the Barriers he not had.3SG that to.read
'As for Barriers, he didn't have to read it'
- c. B': *Ele não teve que ler já o Barriers_{AT}
he not had.3SG that to.read JÁ the Barriers
'As for Barriers, he didn't have to read it' (Int)

(Lacerda 2020, p.25)

(51) *AT subjects*

- a. A: O Pedro leu dez livros do Chomsky pra esse curso.
the Pedro read.3SG ten books of.the Chomsky to this course
'Pedro read ten books by Chomsky for this course.'
- b. B: Já o João_{AT} não leu nenhum.
JÁ the João not read.3SG none
'As for João, he didn't read any.'

(Lacerda 2020, p.209)

Another point comes from comparing BP with Spanish, also claimed to display HR.⁴ As observed by Montalbetti (1984), overt pronominal subjects cannot be variable-bound; only *pro* can be used as a bound variable. Crucially, Spanish overt pronouns are only used when focalized, which is taken by Bošković (2024) to indicate they are in the higher subject position, while *pro* is lower in the inflectional domain - hence only the latter could function as a bound variable.

In BP, however, even though overt pronouns can be used when not focalized, they still disallows a variable bound reading (52).

⁴ See Alexiadou & Anagnostopoulou (1998); Fernandez-Salgueiro (2005); Pires & Nediger (2018).

(52) *Montalbetti's effect*

*Todo mundo_i diz que ele_i é inteligente.
everyone says that he is intelligent
'Everyone_i says he_i is intelligent'

I take this to signal another mixed A/A' behavior of BP overt pronouns: they are not necessarily focused (A), but still disallow a variable bound reading (A').

Among candidates for Spec,A/A'P, Bošković (2024) proposes CP subjects occupy it.

(53) [That John likes Mary] seems to be surprising.

Nunes (2008) observes that CP complements of raising predicates cannot front, though they can in cases of non-raising predicates.

(54) *CP subjects with raising predicates

- a. Parece [que os meninos fizeram a tarefa]
seems that the boys did the homework
'It seems that the boys did their homework.'
- b. *[[que os meninos fizeram a tarefa]_i parece *t_i*]
that the boys did the homework seems
'It seems that the boys did the homework.'
- c. [[os meninos]_i parecem que *t_i* fizeram a tarefa]
the boys seem that did the homework
'The boys seem to have done their homework.'

- a. Não foi dito/mencionado [que os meninos fizeram a tarefa]
not was said/mentioned that the boys did the homework
'It was not said/mentioned that the boys did their homework'
- b. [[que os meninos fizeram a tarefa]_i] não foi
that the boys did the homework not was
dito/mencionado *t_i*]
said/mentioned
'That the boys did their homework was not said/mentioned.'
- c. *[[os meninos]_i] foram ditos/mencionados que *t_i* fizeram a
the boys were said/mentioned that did the
tarefa]
homework
'It was not said/mentioned that the boys did their homework.'

Nunes (2008) additionally proposes that raising predicates assign inherent Case to their clausal complement, rendering it immobile. Taking both CP and HR subjects to occupy the same position, in (54) raising the subject is then the only option but in (55), CP must move since it is closer than the DP in its Spec.

5. Derivation

I propose (56) depicts a simple finite clause in BP: (V movement not represented)

- (56) [CP [A/A'P os meninos; [TP [_{NP} *t_i* comeram bolo]]]]
the boys ate.PL cake

Possibility 1: T uninterpretable phi-features are valued via *Agree*; the DP moves to Spec,A/A'P to satisfy EPP

Possibility 2: the A/A' head bears phi-features, valued via *Agree*; the DP moves to satisfy EPP

Next step: embedding (56) under a raising predicate gives us (57).

- (57) [CP [A/A^{TP} [TP *pro* [_{NP} parece [CP que [A/A^{TP} os meninos_i [TP [_{NP} *ti* comeram bolo]]]]]]]
 seems that the boys ate.PL cake

In a non-HR construction, an expletive *pro* is inserted in the matrix clause, triggering default 3rd person agreement. I suggest *pro* is in Spec,TP, in agreement with the discussion on the Montalbetti effect from the previous section.⁵

Also, an account that places overt DP subjects and *pro* subjects in different positions allows to capture the fact that *pro* does not hyperraise. The distribution of *pro* is very restricted in BP, being disallowed, e.g., for referential 3rd person (58), but allowed as expletives (59), "arbitrary" 3rd person (60), and 1st person (61).

(58) *Compr-ou um carro
 bought-3SG a car
 'He/She bought a car' (int)

(59) Choveu ontem
 rained yesterday
 'It rained yesterday'

(60) Telefonaram pra você.
 telephoned.3PL to you
 'Someone telephoned you'

(61) Comprei um carro
 bought-1SG a car
 'I bought a car'

Note that the non-default inflection in (60) and (61) allows us to test whether these null subject can hyperraise. They can't.

(62) a. *Parecem que telefonaram pra você.
 seem.3PL that telephoned.3PL to you
 b. Parece que telefonaram pra você.
 seem.3SG that telephoned.3PL to you
 'It seems that someone telephoned you'

⁵ On the status and distribution of *pro* in Brazilian Portuguese, I refer the reader to the following works and relevant references cited therein: Pontes (1987), Kato (1989, 1999, 2000), Galves (1993, 1998), Duarte (1995, 2003), Kato & Negrão (2000), Barbosa et al. (2001), Modesto (2000), Ferreira (2004, 2009), Rodrigues (2004).

- 'I seem to have bought a car'

If HR is an effect of subjects occupying Spec,A/A'P and *pro* doesn't occupy this position, it then follows that null subjects can't HR.

Back to the derivation: in order to make the DP subject accessible for movement into the matrix clause, it must move through the edge of CP (in view of the PIC). I take this step to not involve improper movement (A/A' to A').

But where should it land? Departing from an A' position, it may only land in the matrix A/A' position, as shown in (64). (I take the unaccusative matrix *ʔ*P to be non-phasal (Chomsky 2001))

- the boys seems that ate.pl cake

Empirical evidence for a higher landing site comes again from lack of inverted scope even when the subject undergoes typical raising.

- 'It seems that someone loves everyone'

An advantage of an approach that ties HR to a subject-dedicated position is that it allows us to account for why a language may have (subject-to-subject) HR but not (subject-to-object) HR.

(66) *No ECM across a finite CP*

- a. eu te_i=quer-o *t_i*
 I you.SG.ACC=want-1S.PRES
 'I want you'
- b. eu te_i=quero [_{IP} *t_i* comendo coisas saudáveis]
 I you.SG.ACC=want-1S.PRES eating things healthy
 'I want you to eat healthy things' (Twitter 2021)
- c. *eu te_i=quero [_{CP} que *t_i* coma coisas saudáveis]
 I you.SG.ACC=want-1S.PRES that eat.3SG.SBJ.PRS things healthy
 'I want that you eat healthy things' (Int.)

Note that *que* shouldn't intervene in (66c). (67) aims to show that a clitic may raise across COMP material. (68) shows *quer* may take a finite clause as its complement.

- (67) Não te=quero se não me der match (no Tinder)
 not you.SG.ACC=want if not 1SG.ACC give.SUBJN match on.the Tinder
 'I don't want you if you don't match me on Tinder'
- (68) A Maria quer que eu vá pra casa
 the Maria wants that I go to house
 'Maria wants me to go home'

6. Theoretical implications

- PIC and improper movement:

Movement involving the A/A' specifier should neither induce an improper movement effect nor a PIC violation. The prediction is that HR must involve the higher subject position either as launchpad, or as landing site.

- violation of the Activation Condition (AC):

Chomsky's (2000,2001) Activation Condition predicts that a DP marked with structural Case can no longer (A-)move. Assuming the AC, HR should only involve non-A movement. Given the topic nature of BP subjects, I propose that A/A' heads all bear an uninterpretable and unvalued topic feature that must be checked against the DP interpretable feature. We still must account for why such movement may iterate. Carstens proposes for Bantu that subjects undergoing HR have valued gender features. Considering that no valuation takes place on the DP, they

remain accessible for further movement. I propose that topic is such a feature for BP: as an interpretable valued feature, a checking relation may still make it visible for further operations, even if Case has already been valued.

An issue: accounting for quantifier subjects that may still undergo HR⁶

- (69) Ninguém parece que entendeu o problema.
nobody seems that understood the problem
'Nobody seems to have understood the problem.'

Suggestion: such DP have an uninterpretable but valued topic feature (like gender in Bantu)⁷

7. Typological implications

On hyperraising:

I have assumed that a QP-object undergoes QR by adjoining to TP, accounting for the lack of inverse scope in cases like (70).

- (70) Alguém ama todo mundo (who > every; *every > some)
someone loves everyone

A typological prediction is that hyperraising languages must be scope rigid. This is borne out for several HR languages:

⁶ But see Sæbø (), who observes that in Norwegian a quantifier may be topicalized.

(i) noen sykepleiere er det på vakt bestandig
somenurses are there on duty constantly

⁷ Interestingly, a subject position above TP (identified as TopP due to a ban on [+FOCUS] preverbal XPs) has been proposed for several Bantu languages; see e.g., Bresnan & McHombo (1987) for discussion on Chichewa, Letsholo (2002) for Ikalanga, Bliss & Storoshenko (2009) for Shona, for discussion of subjects in Spec,TopP in Nguni, see Carstens & Zeller (2020) for Zulu and Xhosa, and Pietraszko (2021) for Ndebele. These languages actually have HR (see Ura (1994) and the references just cited; I have actually not been able to find the relevant information for Ikalanga). In view of the analysis adopted here based on the A/A' Spec, which is higher than Spec,TP, it seems that this TopP can be readily subsumed into A/A'P, where it would serve as the launch pad for hyper-raising.

(71) *Scope-rigid HR languages*

Finnish (Zimmermann 2003), Georgian (Borise & Polinsky 2018), Greek (Baltazani 2002), Hmong (Miao-Yao) (Creswell & Snyder 2000), Hungarian (den Dikken 2017; Kiss 2002), Japanese (Hoji 1985), Kabardian (Minor 2005), Kikande (Bantu) (Baker 2003), Korean (Kim 2008), Lubukusu (Bantu) (Diercks 2013; Carstens, Diercks, López, Mletshe, Ndayiragije & Sikuku 2010) Mandarin Chinese (Huang 1982), Persian (Shafiei & Storoshenko 2017), Sinhala (Tim Chou & Hettiarachchi 2016), Spanish (Fernández-Salgueiro 2005; Pires & Nediger 2018; Alexiadou & Anagnostopoulou 1998), St'át'imcets (Lillooet Salish) (Davis 2020; Matthewson 1998), Tamil (Sarma 2003), Turkish (Altinok 2017).

On superraising:

Miyagawa (2003) and Saito (2011) have claimed that scrambled objects can satisfy EPP on Japanese OSV sentences. Remember that subjects must scope over negation in Japanese (72). In OSV sentences, however, they can scope under negation. If the object is taken to be in Spec,A/A'P and the subject in Spec,TP, the puzzle is solved (Bošković 2024).

(72) *Japanese SOV*

zen'in-ga sono tesuto-o uke-nakat-ta (all > neg; *neg > all)
 all-nom that test-acc take-neg-pst
 'All did not take the test'

(73) *Japanese OSV*

sono tesuto-o_i zen'in-ga t_i uke-nakat-ta. ($\neg > \forall, \forall > \neg$)
 that test-ACC all-NOM take-NEG-PAST
 'That test, all didn't take'

(Miyagawa 2003, p.183-4)

Now, under the current approach to HR, an object in Spec,A/A'P is expected to superraise, since it occupies the relevant position. If superraising correlates with the object being able to satisfy Spec,LCP's EPP requirement, we then expect this phenomenon to be rare, as objects satisfying EPP is also pretty rare. Actually, a typological gap is predicted:

only HR languages may display SR. A language displaying SR without HR would predict a language in which the EPP may only be satisfied by the object - a language that, as far as I know, doesn't exist.

Indeed, languages that have been claimed to display SR have mostly been claimed to display HR as well.

Below I present a list of languages that have been claimed to have both superraising and hyperraising.⁸ Languages with a C superscript are claimed to display *covert* SR.

SR language	Ref.	HR?
<i>Alutor</i> ^C	Mel'čuk & Savvina (1978), Mel'čuk (1988), Ura (1994)	Ura (1994)
<i>Arabic</i>		
<i>Moroccan Arabic</i>	Wager (1983), Massam (1985), Ura (1994)	Ura (1994)
<i>Standard Arabic</i>	Massam (1985), Salih (1985a,1985b), Ouhalla (1994), Al-Janabi (2022)	Ura (1994)
<i>Berber</i>	Massam (1985)	Ura (1994)
<i>Blackfoot</i>	Massam (1985)	Ura (1994)
<i>Chibena</i>	Trithart (1977), Ura (1994)	Ura (1994)
<i>Chukchee</i> ^C	Mel'čuk (1988), Ura (1994)	Ura (1994)
<i>Cree</i>	James (1984), Massam (1985), Ura (1994)	Ura (1994)
<i>Dinka</i>	van Urk (2015)	van Urk (2015)
<i>Fijian</i>	Massam (1985), Ura (1994)	Massam (1985)
<i>Greek</i>	Massam (1985)	Ura (1994)
<i>Ilokano</i>	Massam (1985)	-
<i>Innu-aimûn</i>	Branigan & MacKenzie (B&MK) (2002)	B&MK (2002)
<i>Japanese</i> ^C	Ura (1994)	Ura (1994)
<i>Kimutbambi</i>	Kaburo (2022)	Kaburo (2022)
<i>Kipsigis</i>	Jake & Odden (J&O) (1979), Massam (1985), Fong (2018)	J&O (1979), Fong (2018)
<i>Korean</i>	Ura (1994) ^C , Yoon (2007)	Ura (1994)
<i>Lisu</i>	Ura (1994)	Ura (1994)
<i>Lusaamia</i>	Carstens & Diercks (C&D) (2009)	C&D (2009)
<i>Lubukusu</i>	C&D (2009)	C&D (2009)
<i>Malagasy</i>	Massam (1985)	Ura(1994)
<i>Mandarin Chinese</i> ⁹	Ura (1994), Jonah Lin (2011)	Ura(1994),Chen(2023)
<i>Nez Perce</i> ^C	Deal (2017)	Deal(2017)

⁸ Although the list is intended to be exhaustive, some languages may of course have been left unnoticed. If the reader is aware of any other language that has been claimed to display both phenomena (or SR only), I welcome them to reach out.

⁹ See Shi (1990) for an alternative view.

<i>Ninean</i>	Seiter (1978, 1980), Massam (1985), Ura (1994)	Ura(1994)
<i>Quechua</i>	Lefebvre & Muysken (1982), (Massam 1985), Ura(1994)	Ura(1994)
<i>Zacapoaxtla Nahuatl</i>	Massam (1985)	

Such a typological gap should not be taken as accidental, and an account must be provided. It is also worth noticing that only 14 languages were listed as having SR in Ura (1994), whereas over a hundred were listed as having HR, which is very telling of the relative rareness of the former. Here the rareness is assimilated to the rareness of objects satisfying EPP.

8. Conclusion

Hyperraising is an effect of DP subjects occupying a higher mixed A/A' position (above the regular subject position). This analysis allows us to tie several BP subject properties to the availability of HR without relying on construction-specific assumptions on the elements involved in such derivations and established a criterion that determines what it takes for a language to have HR - it takes a higher subject.
